

BRINGING DIGITAL INNOVATION

ABOUT US

In the beginning, we functioned as a web page development organisation. Then came the genesis and rise of Elohim Software Solutions, a one-stop platform for our customers to steer through the next generation of business innovation. We help our customers with state-of-the-art business automation, software development and consulting services powered by technology

We have our own AWS automated DevOps environment which enriches the quality of the service provided to our clientele. Our mature software development processes combined with excellent infrastructure have significantly increased the "on-time and on-budget" delivery for software in the offshore model. We specialise in the E-commerce business industry, providing product solutions in the field. This way, we help the companies to leverage new technologies and deliver innovative solutions of high value by bridging the gap between business and technology. Our team of young software experts is driven to consistently deliver even the most challenging technical projects under extremely tight deadlines with no compromise on customer service and support. This enables us to build a strong and ever-growing relationship with our customers.

OUR VISION

We seek to build a world-class reputation for being one of the most innovative IT Solutions and global service providers which can be availed by our customers through one single window. We aspire to offer solutions with robust and structured methodology so efficiently that it rapidly accelerates the transformation of business at the customer's end as well.

OUR MISSION

We are committed to providing our clients with a unique experience with the best-in-class latest technology, effective and affordable solutions, and services anchored in our core principles to eliminate their business obstacles and revolutionise their enterprise.

PHILOSOPHY

We value innovation, foster an inclusive atmosphere, and make swift decisions that benefit our clients. To provide unmatched service, we seek to operate as a team with our clients, combining traditional ethics with contemporary concepts. We are committed to delivering operational excellence in the shortest possible time frame, while also adopting trends and sustainable practices to transform businesses.

VALUES

COMMITMENT - We ensure quality checks at each stage and deliver by taking the triple constraints under consideration.

INTEGRITY - We guarantee appropriate knowledge and skilled resources with the right delivery models.

SERVICE DELIVERY - We provide E2E ownership and operational excellence.

HONORING ONE ANOTHER

We emphasize honouring each other at all times, within the organisation as well as with the external stakeholders. We impart and expect a respectful demeanour, and also believe in forgiving slip-ups.

We recognise each human to have been created in the image of God.

EXCELLENCE

We prioritise our work above everything else and therefore take our time, skills and craft very seriously. This helps us in utilising our assets to equip, encourage and empower not only our customers but even ourselves. Our immovable goal to produce exceptional deliverables motivates us to operate with clockwork precision.

OUR CLIENT SERVICES

A loyal customer is more valuable than a satisfied customer. We think the weight of recognition and empowerment offers the greatest assets and life lessons worth discussing.

OUR TEAM

Our organization consists of team - focused, certified professionals, qualified and highly motivated fellows in their fields, thus helping us build a culture of respect and morality.

CLIENT ENGAGEMENT MODEL

Our team of experts takes care of customer experience with great attention to detail for the delight of our customers. Our global delivery experience grants our customers a flexible business engagement model to achieve their respective goals.

TIME AND MATERIAL

We understand the constant changes undergone by businesses and the modifications of demands based on the market conditions. Our Time and Material (T&M) model offers solutions depending on the project phases, taking triple constraint into account and providing the appropriate effort-based pricing model and relevant resources procured at the right time. Our team is continuously trained to upskill and align with the industry requirements to be able to propose the pertinent pricing model and serve our customers with outstanding expertise.

FIXED PRICE

Our Software Development Engagement model caters to well-defined project requirements and deliverables. In this model, based on the product needs of our customers, we offer fixed quotes and schedules till the roll-out to productions. This helps medium to large enterprises which are looking for location-independent execution.

AGILE CONTRACTING

A flexible, contemporary model where we provide certified teams who can deliver in a scenario where frequent roll-out to market is expected. It requires the uninterrupted involvement of customers and business users at each sprint. The project backlog is prioritised based on user stories and during the sprint retrospective, the rate of delivery would be fine-tuned. This model is suitable for both short term and long term projects catering to self-motivated and self-disciplined teams.

STAFF AUGMENTATION

Some businesses utilise niche, skilled resources and expert opinions to cater to their project delivery. This pricing model helps the customer to augment their team with the required skill set at the right time. It suits those customers who need highly skilled and trained talents to support their market roll-outs with educated risks and better control.

HYBRID

Customers with multiple portfolios and various release patterns require a flexible model. We fix this occurrence by providing customised solutions allowing flexibility of T&M and focused delivery of the Fixed Price model. This helps in aligning the projects to meet the demands faster amid market dynamics.

SAAS

This model allows the customer to experience the product before investing in a one-time product as a monthly subscription. The Customer Success Manager will be responsible and engaged at all levels to help the customer realise the value of the product and use it smoothly till it is adopted.
